

Contractor Benefits

Fast and Easy Installation

THE BLUE DUCT®

Underground Preinsulated Duct System

The BlueDuct® is the only underground duct system that was designed specifically for underground. Our system is fast and easy to install. Many contractors have commented that our system takes one-quarter to one-half of the time it takes to install PVC coated spiral or Fiberglass.

We care about the individual success of each job. We provide free training to help ensure your installation is successful and problem free. Your win is our win!

Direct Bury

There is no need for field insulation, field vapor barrier, or field concrete encasement (eliminating the need for two separate concrete pours). Simply “direct bury” BlueDuct onto the foam trench blocks, and backfill with pea gravel or dry silica sand.

Complete System

With BlueDuct, there is no need to field manufacture boots encased in concrete. We provide the boots in a variety of shapes and sizes. BlueDuct is a complete duct system up to the finished floor.

NSF Certified for R-10
Equivalent Thermal Performance

In Stock

BlueDuct product is in stock and ready to ship. We know that our product is one of the first items installed in a job and are able to help get product to the job site quickly. If the project changes, we can quickly ship the material needed.

Tools for a Fast Install

To help make installing even easier, we offer jigs to use as a template for drilling new holes, ratchet straps to help align and pull large ducts together, and a circular saw with a custom guide to fit the BlueDuct flange.

CAD Drawings

BlueDuct offers free CAD and Revit services. Our team draws the duct system with the engineer's design in grey and our duct system in blue. This drawing is helpful during construction coordination, engineer acceptance, and the field team's ability to assemble the system.

Meets all National Codes

No need to fear inspectors when using BlueDuct as our product meets these stringent codes: R-10 insulation value equivalence rating per the NSF International Protocol - P374 complying with the under-ground duct tests required by the ICC. · UL 181 Section 11, 13, 15, 16, 17, 18, & 21 · UMC—Uniform Mechanical Code 2009 · IMC—International Mechanical Code 2012 · IRC—International Residential Code 2012 · LC 1014 · ASTM 2412 Exceeds all SMACNA seal classes. Listed in IAPMO ER261 and ICC-ES-PMG-1023.

Contractor Training

To help ensure a successful installation, we offer two training webinars a month. On site training is also available. We are confident you will experience and benefit from the quality of our product, quick installation time, and labor savings as a result of using our underground system. After all, your success is our success.

	THE BLUE DUCT™	Fiberglass (FRP)	PVC Coated Spiral
Mold, Mildew & Radon Resistant	•		
Easy to Install	•		
Low Product Cost			•
Low Total Installed Cost	•		
Recyclable	•		
Rust Resistant	•	•	
Easy to Make Job Site Changes	•		
Installation by Only One Trade	•		
Leak Testable System	•		
Factory Made Diffuser Boots	•		

Experience

The BlueDuct system has been installed in thousands of buildings (Commercial, Industrial, Residential) here in the United States and internationally, for over a decade, with trouble-free, long-term performance.
