CONTRACTOR BENEFITS

Fast and Easy Installation

The BlueDuct® is the only underground duct system that was designed specifically for underground. Our system is fast and easy to install. Many contractors have commented that our system takes one-quarter to one-half of the installation time compared to competing underground products — making it 40–50% faster to install. We care about the individual success of each job. We provide free training to help ensure your installation is successful and problem free. Your win is our win!

DIRECT TO BURY

There is no need for field insulation, field vapor barrier, or field concrete encasement (eliminating the need for two separate concrete pours). Simply “direct bury” The BlueDuct onto the foam trench blocks, and backfill with pea gravel or dry silica sand.

COMPLETE SYSTEM

With The BlueDuct, there is no need to field manufacture boots encased in concrete. We provide the boots in a variety of shapes and sizes. The BlueDuct is a complete duct system up to the finished floor.
